

FILTER

# Bravilor Aurora

The Aurora filter system brews filter coffee directly into a portable 5.7 litre dispensing canister. Then, using the machine's touch screen, use the pre-set programmes to set the Aurora to brew the strength of coffee required. We recommend using the Aurora for making up to 195 filter coffees an hour, making it an excellent solution for coffee professionals.

At every stage of the brewing process, the operator can adjust the water temperature, coffee-to-water ratio, pre-wet and brewing time to create the perfect cup of coffee. This machine is an excellent addition to any work, catering, and coffee shop environment, perfect for serving speciality or single-origin coffee to complement their regular coffee menu.
